

AMENDMENTS

In the specification please amend the abstract as follows:

A seal [[10]]for a toilet outlet is described. The seal [[10]]comprises a body [[12]]and a deformable undercut lip[[16]]. The lip [[16]]is arranged so as to roll radially from the body [[12]]when subject to load, such as that exerted by a toilet outlet. The rolling motion of the lip ensures that the seal [[10]]deforms evenly and predictably when subject to load, so reducing the need for precise alignment of the toilet with the seal when installing the toilet.
